Create smart Knowledge Graphs with an auto-expanding layout—no more overlapping! Features 10+ premium themes, full responsiveness, and zero code. Ideal for AI & SaaS visualization.

About this Component

Visualize your systems, ideas, and data relationships with the ultimate Knowledge Graph for Framer.
Move beyond static lists. Whether you are explaining an AI Model, showcasing a SaaS Ecosystem, or mapping out Database Architecture, the Knowledge Graph component brings your complex ideas to life with a smart, interactive, and premium aesthetic.
Unlike standard "orbit" components that overlap and break, this component features a Smart Anti-Collision Engine that automatically calculates the perfect radius based on your content. Add as many nodes as you need; it just works.

Key Features

- Smart Layout Engine: No more overlapping cards. The graph automatically expands and adjusts its radius based on your content density, ensuring a perfect layout every time.
- 10+ Premium Themes: Over 10 curated color schemes (Cyber, Ocean, Sunset, Forest, Mono, Neon, Rose, Gold, Violet, Ice) to instantly match your brand instantly.
- 4 Cinematic Entrances: Grab attention with professional entrance animations: Blast, Pop, Wave, or Fade.
- Native Responsiveness: Automatically transforms from a complex radial graph on desktop to a clean, vertical Timeline View on mobile (<600px). No extra breakpoints needed.
- Interactive & Alive: Features ambient background glows, floating particles inside connections, and smooth hover effects that dim unrelated nodes for better focus.
- Zero-Config Icons: Uses the full Lucide Icon library. Simply type "Brain", "Database", or "Server" in the panel.

Use Cases

AI & Tech Startups: Visualize your "Core Intelligence" or Neural Networks.
SaaS Features: Show how your integrations connect to a central hub.
Documentation: Map out API endpoints or user flows.
About Pages: Visualize team structure or core company values.

How to use

Drag onto your canvas, type your node labels, and watch the smart engine arrange them perfectly. Zero coding required.

The LogoCarousel can be customized through these property controls:

- Instances: Add your logo components to be displayed in the carousel
- Items Per View: Set how many logos appear simultaneously
- Item Spacing: Control space between individual items
- Container Width: Adjust the overall width of the carousel
- Duration: Set how long each set of logos remains visible before rotating (in seconds)
- Stagger Delay: Create a cascading animation effect between items
- Transition: Customize the animation type, duration and easing function

3D curved draggable carousel with infinite rotation. Features drag/swipe controls, auto-rotation, momentum physics, & smooth animations. Optimized for desktop & mobile performance.

3D Curved Carousel Overview

v2.0 — Now with full hover & click support while dragging. The 3D Curve Carousel is a fully interactive 3D carousel built for dynamic visual storytelling. Designed as a curved panoramic 3D carousel, it lets creators build a 3D showcase that feels smooth, responsive, and endlessly rotating. This component supports drag, swipe, and automatic motion, creating a momentum carousel experience that feels both fluid and natural.

Instructions

Simply copy and paste the component into your Framer project. Connect your card designs whether they're images, or videos to the product carousel using the drag handle. Adjust the carousel's layout, 3D perspective, and infinite carousel rotation behavior from the properties panel. Customize details such as rotation radius, item spacing, and visual effects to perfect your perspective carousel layout.

Properties

The 3D Curved Carousel provides 16 adjustable properties arranged into intuitive sections for maximum creative control.

Content & Layout
Items Array – Connect cards to form a seamless ring carousel layout in 3D space.
Initial Angle – Define the starting rotation position for your circular carousel.
Radius – Control the distance between the carousel center and the 3D curved look.
Perspective – Fine-tune the depth and curvature for a truly immersive perspective carousel effect.
Repeat Count – Configure item repetition for an infinite carousel feel with looping visuals.

Auto Rotation
Auto Rotate – Enable or disable continuous rotation for a smooth carousel motion.
Direction – Choose clockwise or counter-clockwise rotation for your carousel.
Speed – Adjust how fast the auto rotate carousel spins to suit your content.
Hover Slow – Add elegant slow-down effects for engaging hover interactions.

Drag Interaction
Draggable – Activate manual control for a drag carousel experience.
Drag Sensitivity – Fine-tune how responsive the carousel feels to your touch.
Momentum – Configure how long the momentum carousel continues spinning after release for realistic motion.
Mobile Drag – Enable touch gestures to create a swipe carousel optimized for phones and tablets.
Scroll Wheel – Allow users to rotate the carousel using a mouse wheel or trackpad for intuitive interaction.

Visual Effects
Edge Fade – Apply gradient fades with customizable opacity and width.
Properties Control Panel

Key Features

Production-Ready & Responsive: This responsive carousel is created for seamless performance on any device. The component's time-based animation system ensures smooth carousel motion and consistent frame rates across scenes.
Advanced Interaction Methods: Users can drag, swipe, or scroll to control the drag carousel or swipe carousel with natural physics and momentum. Three effects, touch gestures, and auto rotate carousel controls make every interaction feel refined and intuitive.
Automatic Rotation System: The configurable auto rotate carousel offers directional control, speed adjustment, and hover sensitive slowdown. It pauses automatically during user interaction and resumes smoothly afterward, maintaining uninterrupted motion.
Performance Optimized: Leveraging GPU acceleration and direct DOM rendering, this premium carousel delivers ultra-fluid 3D carousel animations at 60fps. Optimizations for video content ensure your video carousel runs stutter-free.
Infinite Loop Effect: A seamless circular carousel layout creates an infinite carousel illusion with no visible start or end point. Items repeat in a perfect loop for continuous engagement.
Momentum Physics: Realistic motion dynamics make the momentum carousel feel alive. Users can swipe and spin with physics-based continuity for a tactile, satisfying experience.
Hover & Click While Dragging: Cards fully support hover effects, button clicks, and link navigation even when drag is enabled. This was a highly requested feature - you no longer have to choose between drag and interactivity. Both work simultaneously.
Flexible Content Support: This component works with image carousel, and video carousel.

Use Cases
Portfolio Showcases – Display creative projects or artwork in a rotating 3D showcase using the 3D Ring carousel.
Product Galleries – Present multiple product angles or styles in an interactive product carousel that enhances browsing engagement.
Team Displays – Rotate through team profiles or testimonials using a visually dynamic circular carousel.
Features Highlights – Showcase product features in a 3D carousel that keeps visitors engaged through exploration.
Image Galleries – Build a smooth carousel for immersive image carousel experiences optimized for touch and drag.
Video Showcases – Present demos or promotional reels in a video carousel optimized for performance and clarity.

This 3D Ring Carousel is the ultimate premium carousel solution combining responsive performance, elegant design, and intuitive interaction. Whether you're building a 3D showcase, product carousel, or immersive curved panoramic 3D carousel, this component transforms ordinary layouts into extraordinary experiences. With v2.0, every card is now fully interactive - drag, hover, and click all work together seamlessly.

Fluid Stack Carousel is a premium 3D carousel built to showcase images and videos with layered depth, smooth perspective motion, and cinematic transitions. Designed for Framer, it combines performance, visual richness, and full creative control.
Fluid Stack Carousel delivers a high-end visual experience inspired by cinematic camera movement and depth based composition. Slides are arranged in a spatial stack where the active card takes center stage while surrounding layers fade, scale, and blur naturally to create focus and hierarchy.
Every transition is smooth and intentional. Motion feels physical rather than mechanical, making the carousel ideal for storytelling, portfolios, and immersive brand presentations. The component is fully optimized for Framer and exposes detailed property controls so designers can fine tune both visuals and interactions without touching code.

Key Features

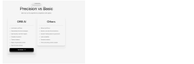
Depth stacked 3D layout with real perspective
Smooth transitions with adjustable timing and easing
Supports both images and videos
Media upload or external URL support
Auto play with adjustable timing
Drag, swipe, click, and keyboard navigation
High performance rendering with GPU accelerated transforms
Customizable slide count, spacing, scale, depth, and rotation
Adjustable borders, radius, shadows, and glow effects
Integrated title and subtitle overlays
Fully responsive behavior across screen sizes
Polished navigation feedback with hover animations

Ideal for

Visual and design portfolios
Product and feature showcases
Creative agency websites
Editorial storytelling layouts
Hero sections with strong visual impact
Brand stories and case studies
Experimental and motion driven interfaces

Where to Use

Homepage hero sections
Case study highlights
Brand storytelling pages
Campaign and launch pages
Media galleries with limited curated content
High impact landing pages

Why This Component Stands Out


Creates ultra cinematic visual depth with real depth and motion
Feels cinematic and premium out of the box
Highly customizable without sacrificing performance
Works seamlessly with Framer native controls
Supports modern interaction patterns including drag and autoplay
Elevates static media into an immersive experience
